RE: Background Arsenic Sampling for Site 21
W911KB-06-D-0007, Task Order 0007
2011 Northeast Cape HTRW Remedial Actions

Bristol Environmental Remediation Services, LLC (Bristol) has prepared this Technical Memorandum (Tech Memo) at the request of the US Army Corps of Engineers, Alaska District (USACE) under Contract W911KB-06-D-0007 for the 2011 Remedial Actions at Northeast Cape, Alaska. The Tech Memo provides results from July 2011 background sampling for arsenic near Site 21, and presents a discussion of the data.

Site Background

In 2010, Bristol excavated 16.7 tons of soil at Site 21, centered around historical sample location 94NE2116722. The excavation area was roughly 17 feet wide, 17 feet long, and 2 feet deep. Eight confirmation samples were collected from the excavation and the results indicated concentrations were still above the cleanup level of 11 milligrams per kilogram (mg/kg). Figure 1 presents a map of the 2010 sample locations and results. The 2010 sample results for arsenic ranged from 4 mg/kg to 180 mg/kg. Table 1 includes the sample results from 2010.

NE Cape = Northeast Cape

2011 Field Activities

The scope of work for 2011 was to collect nine background soil samples in the vicinity of Site 21. The nine soil samples were collected on July 22, 2011, from locations upgradient of the 2010 Site 21 soil excavation. The locations were from areas with no known or suspected anthropogenic sources and from vegetative cover and soil type similar to those observed from the 2010 Site 21 excavation. One duplicate and one matrix spike (MS)/matrix spike duplicate (MSD) sample were collected along with the nine primary samples. Figure 2 shows the locations of the background samples. Table 1 includes the soil sample descriptions from 2010 and 2011.

Sample Results

The results for the nine background samples and one duplicate are included in Table 1. The background sample results ranged from 2.9 to 22 mg/kg. Attachment 1 contains the laboratory report for the 2011 arsenic samples. Also included in Attachment 1 is the laboratory report for the 2010 excavation samples.

The samples collected from background locations in 2011 were all organic silts ranging from brown to dark reddish brown immediately below the active organic layer (some were frozen). Table 1 provides the sample descriptions for each sample collected in 2011. The soil type from the 2010 Site 21 excavation was gravelly or silty peat, with the exception of three samples that were silty gravels. Table 1 includes sample descriptions from the 2010 samples.

Data Evaluation

Statistical analysis, including both estimation and hypotheses testing approaches, are routinely used to estimate background level threshold values for contaminants of concern (COC), or to compare contaminant concentrations from an area of concern (AOC) with background concentrations.

The EPA supports several exposure and risk management and cleanup decisions based on the mean concentration of the COC. A 95% upper confidence limit (UCL95) of the COC values from an unknown population (e.g., background area) can be used to estimate background level mean contaminant concentrations. The background mean contaminant concentration level can

be used to compare the mean concentration of an AOC (e.g., Site 21 arsenic values) (EPA, 2010).

The site background mean concentration was determined by calculating the UCL95 for the background results. ProUCL Version 4. 1 was used to process the data (EPA, 2010). All results from the background study had detectable results and none of the results were qualified as estimated; therefore, all data were included in the analysis. For the duplicate sample result, the primary sample result was used.

Prior to performing the UCL95 calculation, ProUCL was used to perform general statistics for the data set. Attachment 2 includes the ProUCL program input and output data. The analysis by ProUCL determined that the background arsenic data is not normally distributed. Also computed were the Site 21 excavation results. The statistics for both sets are included in Table 2.

**Table 2 Summary Statistics for Site 21 Arsenic Soil Samples
NE Cape, St. Lawrence Island, Alaska**

	2011 Background Samples	2010 Excavation Samples
Number of Observations	10	8
Minimum	3.1	4
Maximum	22	180
Mean	7.322	69.49
Median	6	33
Standard Deviation	5.886	75.87
Standard Error of Mean	1.962	26.82
Coefficient of Variation	0.804	1.092
Skewness	2.354	0.676
UCL95 ¹	11.49	198.5

Notes:

¹UCL95 calculated using gamma distribution

NE Cape = Northeast Cape

Statistics calculated using EPA ProUCL Version 4.1, 2010

UCL95 = mean concentration using a 95% upper confidence limit

Based on simulation studies, the software recommends a method for calculating the UCL95. Since the data was not normally distributed, the program suggests using the UCL95 calculated from the distribution that best fits the data. The ProUCL manual notes that the use of lognormal

distribution yields unrealistic and highly unstable upper confidence limit values, and, subsequently, the value calculated for the gamma distribution was selected over lognormal distribution. The background mean arsenic concentration using a UCL95 calculated by ProUCL and using a gamma distribution is 11.49 mg/kg.

Table 3 compares the estimated background concentration to the Site 21 results. As shown in Table 3, six of the ten sample results (including the duplicate result) exceed the mean background arsenic concentration of 11.49 mg/kg.

Table 3 Comparison of Site 21 Arsenic Results to Background Concentration

Site 21 Arsenic Sample Identification, July 2010	Site 21 Excavation Sample Results, July 2010	Mean Background Concentration using a 95% Upper Confidence Limit (UCL95) ¹	Sample Concentration Above Background?
10NC21SB01	12	11.49	yes
10NC21SB02	180		yes
10NC21SB03	4		no
10NC21SB08**	4		no
10NC21SB04	4.9		no
10NC21SB05	170		yes
10NC21SB06	120		yes
10NC21SB07	54		yes
10NC21SB42	11		no
10NC21SB43***	17		yes

Notes:

¹Statistics calculated using EPA ProUCL Version 4.1, May 2010

UCL95 calculated using gamma distribution

**duplicate sample of 10NC21SB03

***duplicate sample of 10NC21SB42

ProUCL is also capable of performing two-sample hypotheses testing. Specifically, two-sample hypotheses testing approaches are used to compare the average contaminant concentrations of two or more populations such as the background population and the potentially contaminated site areas (EPA, 2010).

Carey Cossaboom
USACE Alaska District
CEPOA CT (W911KB)
August 10, 2011
Page 6

The ProUCL two-sample hypothesis testing was used to compare the population of the Site 21 excavation samples and background sample concentrations. Using, the Student's two-sample t-test, the hypothesis testing found that the two populations were not similar and that the site excavation levels were greater than the site background levels. Attachment 2 includes the output for the t-test hypothesis testing. Table 4 summarizes the results from the hypothesis testing.

Conclusions

The data evaluation has indicated that the 2010 Site 21 excavation results are above the background arsenic level. Further excavation at Site 21, in areas above the cleanup level concentration of 11 mg/kg, is recommended. The results also determined that the mean background concentration using the UCL95 (11.49 mg/kg) is in agreement or similar to the cleanup level of 11 mg/kg.

CASE NARRATIVE

Client: Bristol Env. Remediation Services LLC
Project: NE Cape HTRW
Report Number: 580-27633-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 07/27/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 6.3 C. The following sample containers were received on gel ice, but outside correct temperature range.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

TOTAL METALS (ICPMS)

Samples 11NC21SS01 (580-27633-1), 11NC21SS02 (580-27633-2), 11NC21SS03 (580-27633-3), 11NC21SS04 (580-27633-4), 11NC21SS05 (580-27633-5), 11NC21SS06 (580-27633-6), 11NC21SS07 (580-27633-7), 11NC21SS08 (580-27633-8), 11NC21SS09 (580-27633-9) and 11NC21SS10 (580-27633-10) were analyzed for total metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 07/28/2011 and analyzed on 07/28/2011 and 07/29/2011.

No difficulties were encountered during the metals analyses.

All quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples 11NC21SS01 (580-27633-1), 11NC21SS02 (580-27633-2), 11NC21SS03 (580-27633-3), 11NC21SS04 (580-27633-4), 11NC21SS05 (580-27633-5), 11NC21SS06 (580-27633-6), 11NC21SS07 (580-27633-7), 11NC21SS08 (580-27633-8), 11NC21SS09 (580-27633-9) and 11NC21SS10 (580-27633-10) were analyzed for percent solids in accordance with EPA SW846 3550C. The samples were analyzed on 07/27/2011.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

TestAmerica Tacoma is a part of TestAmerica Laboratories, Inc.

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender immediately at 253-922-2310 and destroy this report immediately.

This report shall not be reproduced except in full, without prior express written approval by the laboratory. The results relate only to the item(s) tested and the sample(s) as received by the laboratory.

The results included in this report have been reviewed for compliance with the laboratory QA/QC plan and meet all requirements of NELAC and the DOD QSM V4.1 (4/22/09). All data have been found to be compliant with laboratory protocol, with the exception of any items noted in the case narrative.

CASE NARRATIVE

Client: Bristol Env. Remediation Services LLC
Project: NE Cape Landfill, St. Lawrence Island
Report Number: 580-21446-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

Following DoD QSM guidelines, manual integrations were performed only when necessary and are in compliance with the laboratory's standard operating procedure, Acceptable Manual Integration Practices, SOP No.: Q-S-002. The reason(s) for manual integration have been documented on the affected chromatogram(s), which is/are provided in the raw data package. The raw data also includes the original chromatogram(s) prior to any manual integration being performed. Manual integrations are detailed in the manual integration summary forms following this narrative.

It should be noted that samples with elevated Limits of Quantitation (LOQs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the LOQs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 09/08/2010; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.5 C.

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

TOTAL METALS (ICPMS)

Samples 10NC21SB42 (580-21446-1) and 10NC21SB43 (580-21446-2) were analyzed for total metals (ICPMS) in accordance with EPA SW-846 Method 6020. The samples were prepared on 09/11/2010 and analyzed on 09/13/2010.

For Arsenic, the ICP-MS ICSA standard contains trace impurities derived from the manufacturing process, which may cause these standards to fail method QC criteria. Regrettably corrective action can not be performed for any outliers other than to note deficiencies in the laboratory's QC report section. The data was qualified "Q" and reported.

The RPD for Arsenic in the duplicate analysis of sample 10NC21SB42DU (580-21446-1) was outside advisory QC limits. The sample matrix may be non-homogeneous.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS

Samples 10NC21SB42 (580-21446-1) and 10NC21SB43 (580-21446-2) were analyzed for percent solids in accordance with EPA SW846 3550C. The samples were analyzed on 09/11/2010.

No difficulties were encountered during the % solids analyses.

All quality control parameters were within the acceptance limits.

THE LEADER IN ENVIRONMENTAL TESTING

TestAmerica Laboratories, Inc.

Cooler ID No. MW-70TAL Work Order 21446

COOLER RECEIPT FORM

Project AF Cap Landf IICooler received on 9/8 and opened on 9/8 by CB
Bethy Cambli

(signature)

Temperature upon receipt: Cooler 4.5 oC.
Temp. Blank oC.

1. Were custody seals on outside of cooler and intact? YES NO
- a. If yes, how many and where: 2 front back
- b. Were signature and date correct?
2. Were custody papers taped to lid inside cooler? YES NO Copy of CO
3. Were custody papers properly filled out(ink, signed, etc)? YES NO
4. Did you sign custody papers in the appropriate place? YES NO
5. Did you attach shipper's packing slip to this form? YES NO
6. What kind of packing material was used? Bubble bag/wrap Blue YES NO
7. Was sufficient ice used? YES NO
8. Were all bottles sealed in separate plastic bags? YES NO
9. Did all bottles arrive in good condition (unbroken)? YES NO
10. Were all bottle labels complete (no., date, signed, pres, etc)? YES NO
11. Did all bottle labels and tags agree with custody papers? YES NO
12. Were correct bottles used for the test indicated? YES NO
13. If present, were voa vials checked for absence of airbubbles and noted if found? YES NO MS
14. Adequate volume of voa vials received per sample? YES NO MS
15. Was sufficient amount of sample sent in each bottle? YES NO
16. Were correct preservatives used? YES NO
17. Were extra labels added to pre-tared containers? YES NO MS
18. Corrective action taken, if necessary:
a. Name of person contacted: _____
b. Date: _____

Minimum	4	Minimum of Log Data	1.386
Maximum	180	Maximum of Log Data	5.193
Mean	69.49	Mean of log Data	3.37
Median	33	SD of log Data	1.589
SD	75.87		
Std. Error of Mean	26.82		
Coefficient of Variation	1.092		
Skewness	0.676		

Warning: There are only 8 Values in this data

**Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions**

The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

t-Test Site vs Background Comparison for Full Data Sets without NDs

User Selected Options

From File	WorkSheet.wst
Full Precision	OFF
Confidence Coefficient	95%
Substantial Difference (S)	0.000
Selected Null Hypothesis	Site or AOC Mean Less Than or Equal to Background Mean (Form 1)
Alternative Hypothesis	Site or AOC Mean Greater Than the Background Mean

Area of Concern Data: Site 21 As

Background Data: Bkgnd As

Raw Statistics

	Site	Background
Number of Valid Observations	8	9
Number of Distinct Observations	8	8
Minimum	4	3.1
Maximum	180	22
Mean	69.49	7.322
Median	33	6
SD	75.87	5.886
SE of Mean	26.82	1.962

Site vs Background Two-Sample t-Test

H0: Mu of Site - Mu of Background <= 0

Method	DF	t-Test	Critical	P-Value
		Value	t (0.050)	
Pooled (Equal Variance)	15	2.460	1.753	0.013
Welch-Satterthwaite (Unequal Variance)	7.1	2.311	1.895	0.027

Pooled SD 52.006

Conclusion with Alpha = 0.050

* Student t (Pooled) Test: Reject H0, Conclude Site > Background

* Welch-Satterthwaite Test: Reject H0, Conclude Site > Background

Test of Equality of Variances

Variance of Site	5756
Variance of Background	34.64

Numerator DF	Denominator DF	F-Test Value	P-Value
7	8	166.161	0.000

Conclusion with Alpha = 0.05

* Two variances are not equal
